Note. SES-LFP – Sexual Experiences Survey-Long Form Perpetration. CRAPE – item count of self-reported completed acts of rape. Trait z-scores and CRAPE square root transformations used for dimensional analyses. OR calculations were based on dichotomized trait (> 1 SD) and CRAPEg (> 0) metrics. Bolded traits were significant in both dimensional and categorical analyses. Respondent age covaried in analyses. $N = 472$. * $p < .05$, ** $p < .01$, *** $p < .001$.
